## Welcome!

In this spreadsheet are dozens of tables and graphs that will be useful for completing the existing conditions section of your housing element.

For this preliminary release we used data for Belmont, but once the template is finalized, we will produce similar information for each municipality.

This is an ideal time for us to receive comments and suggestions. Please feel free to send us your thoughts. Please send comments to abrams@bdplanning.com by June 13th, 2008.

A few key points about the material are summarized below:

## Overview

The first nine sheets in the Excel document have charts and graphs that you can use for your housing element (all of these begin with numbers).

The raw data are also included, in worksheets that begin with letters (starting with sheet a_data_ABAG_proj_07). By providing the raw data, it will make it easier for you to produce additional charts and tables as you see fit.

## Contents

This document contains a large number of graphs and tables. You are under no obligation to use all of these, but they are available if you choose to incorporate them.

2_Charts
Population
Age of Residents
Average Household Size
Household Growth
Household Income
Tenure
Household Type
Movement in and Out of City
Job Growth
Jobs-Housing Balance
Type of Employment

8_Special housing needs
Seniors and poverty
Number of seniors
Number of people with disabilities/type of disability
9_Housing need
RHNA
Additional analysis of need (beyond RHNA)
Buying power of various jobs
Income needed to buy home
Mismatch between supply and need

## Disclaimer

The charts and tables are still in draft form. In particular, formatting, spacing, fonts, and titles are not 100 percent consistent. There are likely a few glitches in the equations that need to be worked out. In some cases, you will see notes written about changes that need to happen. These notes will be removed in the final version.

Do to the nature of the program, the Excel document does not look great when printed. The final version will be in Word and this will be set up to print properly.

If you find problems, please let the project team know. You can call Joshua Abrams at 510.658.2827 or email at abrams@bdplanning.com.

Population Change

## Age of Residents

Eventually income chart will match state low income categories

This chart shows the total number of people who moved in or out from 1990 to 2000 by age group. A positive number means more people moved in and a negative number means more people moved out. The high number of older seniors may be due to high than average life expectancies in California. This table will not be here in the final version, but there will be an explanation as part of the write up.

## Charts Included

Population growth
Jobs to Housing Ratio
Population Change
Average Household Income

Table D15. Movement in and out of City
This table shows net migration in or out of the city from 1990 to 2000.
For instance, based on the 1990 census we 'expected' to see
388 more people in their 40's in 2000 (accounting for mortality rates).
We can conclude that these people likely moved out of the city.

| Age in 2000 | Net loss or <br> gain in <br> numbers |
| :--- | :--- |
| $10-19$ | -151 |
| $20-29$ | 853 |
